

USA - CM3 Commercial White

The popularity of container swimming pools is surging, with steel as the primary material, but rust continues to be a prevalent challenge. Polyferrous™ was uniquely designed to combat rust while offering an appealing and long-lasting finish.

Polyferrous™ is a system that combines the benefits of ecoFINISH's X40Z zinc-enriched epoxy primer with a beautiful and tough polyethylene external flame spray powder coating. This system creates cathodic protection that provides an effective anti-corrosive, rust-preventative and decorative coating that offers superior chemical resistance.

Our Polyferrous™ system significantly extends the useful life of your ferrous metal structure and imparts cathodic protection to the base metal. Once applied, finish cures to a tough, non-convertible coating at ambient or elevated temperature that can be used above or submerge under water.

**Polyferrous™ can be used for a wide range of interior and exterior industrial applications on metal:**

- Water Tanks
- Pools
- Cisterns
- Containers
- Piers
- Catwalks
- I-Beams
- Bridges
