Slow cure time, stress cracks, mottled colors. These are common problems with gel coat. That's why ecoFINISH developed polyFIBRO® - a thermo-polymer coating for fiberglass, scientifically formulated to overcome the issues seen with gel coat. polyFIBRO® is long-lasting, chemical, chalk, and spall resistant. Our flexible coating can withstand the movement of the fiberglass shell, reducing stress cracks.

Unlike gel coat and paint, polyFIBRO® cures immediately, which means that you don't have to wait to enjoy your pool. Once installed, all you have to do is balance and swim! polyFIBRO® is ideal not only for fiberglass swimming pools, but perfect for resurfacing steps, water slides, and diving boards. It can even be used to coat reflection pools!

Ditch the gel coat and paint. With our modern, stylish colors and durability, polyFIBRO will give your pool a high-quality, luxury feel for you and your family to enjoy for years.

### BENEFITS

- Cures instantly
- Colors won't mottle
- Crack resistant
- Simple maintenance
- Easy to repair
- Soft on feet
- pH Neutral
